

# Built for Purpose

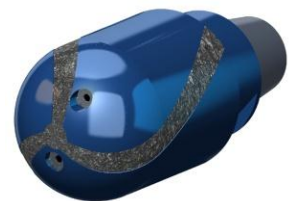

*Matrix and Steel Bits, Downhole Tools and Specialty Parts*

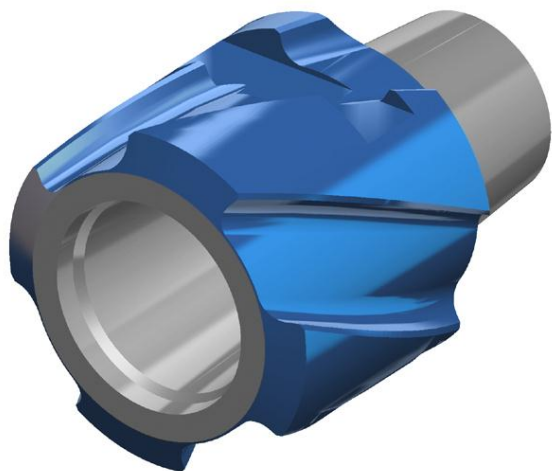

At OTS, we have leveraged our experience in ultra-hard material processes and downhole design to produce bits and tools to solve specific issues for both operators and independent service companies. Our product offering reflects our ability to innovate for drilling operations.

We have custom designed bullnose subs, dog subs, rotary steerable bits with extreme gage lengths and special design gage diameters; pipe conveyed logging reamers, low-invasion core bits and many other tools built for specific purposes. Our flexibility to work in tungsten carbide matrix, steels and even some special alloys allows unique solutions to engineering issues in drilling operations.

Our hands-on drilling experience, rapid development and delivery time and unique approach to engineering allow OTS to produce field workable solutions. We deliver products to solve problems or leverage opportunities – and we do it rapidly.
